

Handling and washing tables

Tasks

To ensure the simplest and safest running of the production process, using the right tools is essential. Forplan offers washing tables, dispensing tools and storage containers. In this respect, the range of tools is constantly being expanded and adapted to customers' needs.

Principle of operation

Forplan washing tables can be made individually in line with the customer's premises. A water connection, including a flushing nozzle, a washing sieve, as well as plenty of storage area, are integral parts of flawless pre-cleaning operation.

Nylon sieves with all mesh sizes and in the desired dimensions for drying and separating parts and media can be delivered. Also included in Forplan scope of delivery are filling doses, scales, coated separation sieves with all mesh sizes and in all dimensions, bar magnets, demagnetising devices, funnels, spare parts and consumable media.

- Washing tables: they are tailored to Forplan systems and allow for ergonomic work
- Nylon sieve: chips and parts are sprayed, convected as well as dried, and can therefore be separated more easily
- Filling doses: accurate powder and compound dosing
- Separation sieves: all mesh sizes and holes for part/chip separation

Advantages

- All from a single source
- Short delivery times

Examples of use

- Use of all products offered at Forplan (in-house)
- Watch industry (tiny parts)
- Turning plants (small mass-produced parts)
- Décolletage
- General mechanics

Range of components

These tools are best suited to all parts and processes.
